

Pablo Martínez Agulló

has successfully completed the

**Leiden/ESA
Astrophysics Program
for Summer Students 2016**

June 1st – August 12th 2016

LEAPS is a 10-12 week summer research program in astronomy, astrophysics, and instrumentation conducted in collaboration with research scientists from Leiden Observatory, European Space Agency, and industry partners Airbus DS & TNO. LEAPS projects involve analysis of data from world-class telescopes, space missions, and supercomputers, covering nearly all areas of astronomy and space science research e.g. star formation, galaxy evolution, astrochemistry and planetary geology, from laboratory astrophysics to computational astrophysics and hands-on work in space industry
